OBJECTIVE

Motivated Computer Engineering student seeking an entry-level role as an AI Engineer / Machine Learning Engineer, focused on building secure, scalable, and reliable AI systems with strong foundations in machine learning and AI security

EDUCATION

B.E. Computer Engineering <i>TPCT's Terna Engineering College, University of Mumbai</i>	Nov 2022 – May 2026 <i>CGPA: 9.0/10.0</i>
Class XII (AISSCE) <i>Central Board of Secondary Education</i>	2022 <i>Percentage: 91.20%</i>
Class X (AISCE) <i>Central Board of Secondary Education</i>	2020 <i>Percentage: 95.80%</i>

WORK EXPERIENCE

AI Security Intern <i>Audix Technology, Mumbai, India</i>	Dec 2025 – Feb 2026
Guardian AI – Developed a full-stack AI security platform using React.js and FastAPI to protect Large Language Models (LLMs) and AI Agents against adversarial attacks, including prompt injection, jailbreaking, PII leakage, and RAG poisoning.	
Data Analyst Intern <i>Cognifyz Technologies, India</i>	June 2025 – July 2025
Analyzed large datasets using Python and SQL to generate actionable business insights.	

PROJECTS

JobSphere AI (AI-Powered Job Portal) <i>React, Node.js, MongoDB, AI/ML</i>	2025
- Developed an AI-powered job portal connecting job seekers and recruiters with intelligent job matching. - Implemented recommendation system using ML to suggest relevant jobs based on user profiles and activity. - Built secure authentication and role-based access for job seekers, companies, and admins.	
Phishing Email Risk Calculator <i>NLP, BERT, Scikit-learn</i>	2025
- Engineered a risk scoring system using NLP to detect phishing patterns in email headers and body text. - Achieved 92% accuracy in classifying malicious vs. benign emails using a fine-tuned transformer model.	
Secure Code Reviewer (LLM) <i>Llama 3, LangChain, Python</i>	2025
- Fine-tuned a Llama 3 (8B) model to automatically detect security vulnerabilities (SQLi, XSS) in code snippets. - Implemented prompt engineering guardrails to prevent the model from generating insecure code suggestions.	

TECHNICAL SKILLS

Languages: Python, C++, SQL, JavaScript, Solidity
AI/ML Frameworks: TensorFlow, PyTorch, Scikit-learn, LangChain, Llama 3, Hugging Face Transformers
Web & Data: React.js, Flask, Pandas, Node.js, NumPy
Developer Tools: Git/GitHub, Docker, VS Code, Streamlit, Google Colab, Postman
Core Concepts: Data Structures & Algorithms (DSA), OOP, DBMS, Cryptography, OWASP Top 10
Soft Skills: Problem Solving, Technical Research, Documentation, Agile Collaboration

ACHIEVEMENTS

Research Publication	Accepted 2025
- Paper on Privacy-Preserving Decentralized Finance using Zero-Knowledge Machine Learning accepted at Blockchain Kaigi (BCK) 2025. - Research focuses on verifiable inference for DeFi credit scoring models without revealing model weights.	
Book Chapter Contribution	2025
Abstract accepted for CRC Press book "Mathematical Advances of AI in Healthcare".
